\*\* This charge does not cover the pulling of drop pipes.

- Pump pulling does not qualify for mobilization/demobilization for pump pulling equipment
- If a pump breaks off or becomes lodged in the wellbore while being pulled and obstructs the wells' borehole, obstruction charges are then added and pump pulling charges are deleted.
- If an obstruction is present in the borehole, after the complete pump assembly is removed, pump pulling charges will still apply in addition to the obstruction charges.
